

Here is the latest as of September 18th:

****We are not cleared to give Covid Vaccine boosters at this time****

The FDA's advisory committee has recommended Pfizer Covid Vaccine booster shots for people 65 & older and also vulnerable population groups such as high-risk patients and healthcare workers. They have recommended this booster to be given 6 months after the second dose of Pfizer vaccine was administered. This has not yet been endorsed by the CDC. There are anticipated meetings Wednesday & Thursday this week, and we believe we will soon get the "green light" to proceed with boosters to certain population groups.

Please note only PFIZER boosters are being considered at this time. Patients who received other vaccines will not be eligible for a 3rd dose at this time.

Unlike winter & spring, there is plenty of vaccine to go around. We plan on again hosting mass vaccination events offsite in larger spaces, and continuing to offer shots in store most every afternoon.

We will continue to provide updates as information becomes available.
